LISTING OF CLAIMS

Claims 1-17 (canceled)

18. (Previously presented) A semiconductor substrate having an array of die areas with integrated circuits and kerf areas with fill patterns comprised of:

(a) a patterned conducting layer forming portions
5 of semiconductor devices and a patterned fill layer in said kerf areas, wherein spacing between said patterned fill layers and said die areas is not greater than about 2 micrometers;

(b) a spin-on-glass layer over said patterned
10 conducting layer, wherein said patterned fill layer in said kerf areas results in a uniform coating of said spin-on-glass layer over corners of said array of die areas, and said spin-on-glass layer converted to a silicon oxide by curing, and chemically-mechanically
15 polished back to form a planar silicon oxide layer;

(c) an insulating layer on said silicon oxide layer;
the structure described in elements (a) through (c) formed for each additional patterned conducting layer, one upon the other, required for said integrated
20 circuit.

19. (Original) The structure of claim 18, wherein said conducting layer is a metal.
